Hi.

I have a file of data of
x,y,L .

I need to compare of L with a fix value and plot (x,y) with less " L "
with one color and the other (x,y) with other color.

The problem is I need to compare L ,then store the x and y s in new
variable , for example new_1 and new2 ,then plot them.

Fro this plot, I think the only way is to store data in array. but I
need dynamic array and I don't know how can I create dynamic array ?

best,nakisa
