Well, I found out that I have to use IDL_INT as type in my C++-code to get it working.

You might need to provide more information on what types you are using.

In my own experience, I find it helpful to make test cases which are written in C-only to be sure that the types are being resolved correctly.

Robbie

Thanks for the tip, I will do that in the future. However the program, at least run now (still not sure correctly though, but that's todays problem) when I changed the variable type. Btw, does someone now if there is a possibility to debug the c-code when calling it from IDL
