Anyone managed to get a beep out of IDL recently? Back in 2000 there seemed to be a few possibilities...

[http://groups.google.de/group/comp.lang.idl-pvwave/browse\\_thread/thread/601f5cbc0d28ed29/d3615094fb090fd2?lnk=gst&q=beep#d3615094fb090fd2](http://groups.google.de/group/comp.lang.idl-pvwave/browse_thread/thread/601f5cbc0d28ed29/d3615094fb090fd2?lnk=gst&q=beep#d3615094fb090fd2)

None of them work for me now: string(7b) is a square; beep, although still an existing command, gives not even a bing; and the winclip.dll doesn't work under 64-bit.

I could manage with 'spawn', but a platform-independent beep would be better...

Greg
