Subject: Who called that procedure?

This is a minor problem but it has cost me a half-hour a couple of times.

I run RESOLVE_ALL to make sure that I am including all necessary procedures when distributing software.   One procedure may yield ~200 compiled supporting procedures, and I see one -- say obsolete.pro -- that should not be being used any more.   So I want to know which of the 200 procedures is still calling obsolete.pro.   There does not seem to be any pattern to the order of procedures displayed by RESOLVE_ALL so that does not help.   What would be nicest I suppose would be a tree diagram of all the dependencies.

In the end, I can simply grep the 200 procedures to see which one has a call to obsolete.pro. But is there a better way?   Thanks, -- Wayne
