Yes, the entry is below. I can't seem to figure out a way to give you a link to it, but it's on the 4th page of IDL contributions.

wincl_7.0.0.1.zip

Windows console application that provides functionality historically found in the Unix command-line IDL, with some new, additional features.

ï¿½ Redirect output to file ï¿½ Keyboard shortcuts ï¿½ Command recall ï¿½ Lists

previous IDL commands issued ï¿½ TAB command matching ï¿½ IDL MP mode, allows creation of multiple IDL sessions ï¿½ IDL MP session can be a mix of 32-bit and 64-bit processes ï¿½ Can post "asynchronous" commands to IDL MP sessions Full details and installation instructions can be found in the .doc file contained in download .zip file. Be sure and check out the list of issues and bugs at the end of the doc. Updates: 7.0.0.1 ï¿½ Added support for run-time distributions, i.e. will first look in the same directory as the idl.exe to locate the necessary IDL files. If found, will use those. Otherwise, will attempt to locate an official IDL install location. 7.0.0.0 ï¿½ Initial implementation
