
Subject: Plotting over a lunar map

Hi everyone,

I have an image the moon that I need to plot things on- things like positions of landing sites, and satellite tracks across it. I've read the image in and displayed it using tv, but I'm having trouble overplotting.

I can get the positions of the Apollo sites plotting onto it, but in the wrong place. I'm fairly sure the problem is I'm trying to plot in coordinates when the image isn't in them. Is there a command to say "treat this image as a map of projection X"? Or do I need to convert my coordinate inputs into x,y values?

Or, of course, am I barking totally up the wrong tree?!

Thanks for your help,
Jimmy
