The shell archive seems to be missing export.h that is referenced in mif.c.

Have you been able to get powerpoint (or any MS-Office 4.x app) to import CGM files containing raster components? The .flt just produces errors when I try. Works fine for vectors, though.

Fergus

Surely framemaker provides support for importing cgm files. I have found
the IDL support for cgm to be extremely useful for importing into
Microsoft Powerpoint. When converted to a Powerpoint object IDL plots
can be manipulated in the same way as the above author claims plots can be in Framemaker.
