Gruess Gott.

If you first kill all your widget window (manually, but see below)
and then type

```
IDL> retail  
IDL> xmanager
```

that normally does the trick.

There is a widget command `widget_control,/reset` which works about half
the time to automatically kill all the widgets (this is under X). I
have a routine `KILL.PRO`:

```
widget_control,reset  
retail  
xmanager
```

which I call with `@KILL` when my widget apps die, gell.

Fergus

```
