Subject: How can I know all the information of a CDF file?
Posted by litongmu on Thu, 16 Apr 2009 18:19:08 GMT

Hi all,

I am not sure whether there is anyone who is working on CDF files. But
if there is, I want to ask how you get the variable information, like
the variable name. I know how to do that in Matlab. But as to
manipulating CDF files, Matlab is not as powerful as IDL. So I want to
switch to IDL. But I do not want to use them both. Because one of my
machine do not have a Matlab license. So please tell me if you know
the answer.
Thanks in advance.

Tongmu
