recently,when i do some works with the objects:IDLffDXF,I found some bugs.I wanna report it to the ittvis.But i don't know how to connect to the ittvis.Is there somebody who can tell me how to deal with is? the bugs are:

- 1.when use the function GetEntity,the IDL_DXF_SPLINE entity can't be interpret correct.
- 2.some dxf files can't be read .the wrong message was:"Error opening file,F:\a.dxf,Attempt to add duplicate handle".The .dxf file was convert from a .dwg file with the format AUTOCAD 2004 DXF or AUTOCAD 2000/LT2000 DXF,sometimes the 2004 DXF can be read correctly,but sometimes the .dwg file need to be convert to 2000/LT2000 DXF format.

hope somedody can help me,thanks~~~~~
