Hi,

i am new in idl-envi world. I work on a old idl script.

This script run perfectly with the idl command line and i try to create a "sav" file for use it in runtime mode.

But i launch resolv_all command after compiling my script i have the error "Attempt to call undefined procedure/function: 'ADAPT_FILT_EVENT'." See in the end of this message.

I have no function or procedure in my source named "ADAPT_FILT_EVENT" and there are no file in itt(idl/envi) directory with this name.

Someone have an idea on this error ?

thanks in advance

```
IDL> .compile batch_calib_one_file_omega
```

```
% Compiled module: CALIB_ONE_FILE_OMEGA.
```

```
% Compiled module: BATCH_CALIB_ONE_FILE_OMEGA.
```

```
IDL> resolve_all
```

```
% Attempt to call undefined procedure/function: 'ADAPT_FILT_EVENT'.
```

```
% Error occurred at: RESOLVE_ALL_BODY
```

```
%           RESOLVE_ALL
```

```
%           $MAIN$
```

```
% Execution halted at: $MAIN$
```

```
IDL>
```
