I have the following problem with MODIFYCTT: from all changes which I put into the color table only the first 217 values are accepted. The higher values are filled with some semi-random colors.

I use the following procedure:

- 1) change a table with XPALETTE
- 2) COMMON colors,X,Y,Z
- 3) MODIFYCT,desired_number,'new_name',X,Y,Z,file='my_table'

When I call the table with XLOADCT immediately after generating it , it looks exactly like I desired. On a following recall the described problem shows up.

Maybe I am just stupid certainly I need some comments.
Thanks, Christian M. Mueller (cm @ fserv1.mpib-tuebingen.mpg.de)
