Hello,

We are trying to make a Batch file with several Envi processing tasks, one of the task is to build a mask from a vector file (in shp format). From the ENVI menu there is a command to do it called: "Build Mask", and also a command called "Apply Mask" for the latter there is a correspondent ENVI\_MASK\_APPLY\_DOIT, but for the former there is not. Does anybody know how to do it?

Jose
