I am pleased to announce that IDL 7.1 is now available to download from the ITT VIS website. IDL 7.1 expands on the modernization introduced in the IDL 7.0 Workbench with new features like the Tool Palette, greater control over the interactive iTools visualizations, the ability to open many file types without writing any code, and even IDL command line mode for Windows. Our goal is make IDL even easier to use whether you're an experienced or new user.

Enjoy,

Bill Okubo, IDL Product Manager

Hi Bill,

I see that on the Mac it requires an old Java version 1.3.1 instead of the standard 1.5.

Will it not work at all without 1.3.1 or is that just an insurance on your side, that you didn't develop it with that version?

Do you know explicitly of any incompatibilities/problems with 1.5?

Cheers,
Michael

I was a bit worried too, but just continued on and have not experienced any problems yet with my installed Java 1.5.

Mike

Thanks so much for your positive fast feedback! Now I will install it

as well! One measurement is better than none. ;)

Best regards,
Michael
