So you have a UTF-8 encoded file (I don't understand all this encoding things, but it seems 3-bytes for the chinese characters and 1 byte for the bracktes and the comma ).

I think the only way is to read the file unformatted (use readu).

Afterwards you can do this to extract the three variables:

```
str="(??,?? ? ??? ???,??)" ; you have to readu it from your file
```

```
str=strsplit(str,",",/extract)
```

```
A=str[0]
```

```
B=str[1]
```

```
C=str[2]
```

Does this help?
