That's the wrong question, because HDF-EOS files are HDF files, just in a particular format. The question you probably want the answer to is "How do I tell whether an HDF file is an HDF-EOS file?".

The simplest way I can think of is to look for an HDF file attribute named "HDFEOSVersion". It should contain a string like "HDFEOS_V2.9".

What about trying
EOS_Query?

"This function returns integer value of 1 if the file is an HDF file with EOS extensions, and 0 otherwise. "

Ah, maybe it is just me, but I have a hard time spotting these useful routines in the L-O-N-G alphabetical listing of routines. Who thought an alphabetical listing would be the best way to present this information!?

Cheers,

David
