Like another reviewer, I bought this based on Fine Homebuilding's test of reciprocating saws. It's my first recip, thought I've borrowed others to use before. This has a nice heft to it, is very comfortable to hold and operate, and works like a champ. The day after it arrived I used it to tear through some walls so I could gain access to the attic space behind them, and then reframe the opening. It went through the studs a little slower than some other saws, and the blade is only just long enough to reach through ½" drywall and the wide edge of a 2x4, so I had to make a couple of recuts. If I did rough framing or renovation for a living, I think I'd go with Makita's top of the line saw, which got Fine Homebuilding's best rating. But for DIY home renos, this is exactly what you need, and a great value.

I bought this saw because of the "Best Value" rating that it received in the November 2005 issue of Fine Homebuilding. I am very satisfied with it! I especially love the quick blade change system. I have nothing but good to say about Makita tools. I own an arsenal of them. They are, without exception, solid, dependable, comfortable, easy to use and very durable. I am hoping that the quality of Makita tools remains high. As long as it is, I will continue to purchase them.

9A, Variable Speed Reciprocating Saw, Tool-Less Blade Change & Shoe Adjustment, Internal Dust Blower System Clears Debris From The Line Of Cut For Better Visibility & Accuracy, Heavy Duty Shoe Features Tool Less Adjustment, All Ball & Needle Bearings For Longer Tool Life, Includes 1 Each Blade & Plastic Tool Case.

The Makita 9 Amp Reciprocating Saw has variable speeds and a long 1-1/8-inch stroke for fast cutting. The ball and needle bearings extend its tool life and the externally accessible brushes allow easy maintenance. Blade and shoe changes are quick and painless with this saw's tool-less adjustment feature. Even better, the powerful 9 Amp motor allows a powerful, continuous operation and an internal dust blower clears debris from the line of cut for better visibility. A plastic case comes included for convenient storage. This saw measures 17-3/4 inches long, weighs 7.1 pounds, and is backed by a one-year limited warranty.
