This reads like an Apple software update description ... vague. ;-)

Can we get more details on what is fixed so that we know whether
to rush out and install this or whether it is something that can wait?

Thanks, Ken Bowman

Ken - It's the art of documenting bugs... ;-)

The IDL Workbench editor will have severe problems and will not work properly. It is an Eclipse issue that appeared with the OS X 10.5.7 release. If you want to install it in anticipation of updating to 10.5.7, that works fine.

Hope this helps - Bill

Thanks, Bill. Since I don't use the Workbench editor I don't have to jump on this one.

Ken

I can't log in on <http://www.itvis.com/> , apparently the website/
server is having some problems.
Please fix this, I need the updated Workbench, since I'm using 7.1 now
and it is giving me problems, and I'm working on a project with a
nearing deadline and the issues of 7.1 are annoying.

Yes, sir, I'll get right on it! Are you, uh,
current with your service contract?

Cheers,

David

P.S. It may not be obvious with all the warm fuzzies
we tend to send IDL's way, but we don't actually
work for ITTVIS. In fact, they would probably
rather not have anything to do with us. Please
don't mention our names when you contact them to
complain about this. :-)

Hehe, I know :)

Well the site is working again and the update went fine and things seem to work properly again.

Greetings,
Arne
