200 is an odd number. (Well, at least in the sense of it being a curious number.) I would guess a bug in someone's code (and probably not yours), in which a file handler was not being released properly. I think I would take this one straight to ITTVIS.

Cheers.

David

The latest version of MCTK includes a fix for this issue, which actually relates to a limitation in the underlying HDF library used by MCTK. If you go to the Code Library section of the ITT VIS website and search for "MODIS", you'll find an entry for MCTK that includes a download link.

Hello David and Devin,

> Thank you for your help.

Thank you for your answers, I will have a look to the new version.

Cheers.
