Guys,

It's a very basic question: I'm placing several objects in a Z-buffer (256 colors, 640x750). Among them I've a map (contour), annotations (xyout), a scale bar, etc.

Now I'd like to add a logo (jpg image). How can I place this object in the z-buffer before writing everything to a png file

(write_png,'filename',tvrd(),r,g,b)

Thanks!

Daniel
