
Subject: Exporting matrices without filling blank space with zeros

I have several arrays with one column, but with different number of lines. For example, arrays 1 and 2:

array1

10
30
12
34
12

array2

102
34
14

I want to put these arrays in one ASCII file or SYLK spreadsheet, like this:

10 102
30 34
12 14
34
12

I guess it must be easy, but I can't do that, once the output matrix fills the blank spaces with zeros. How can I do that?

Best
Julio
