---

I have problem with precision.

I typing

IDL> b=13.37943889D

and then i typing

IDL> help,b

B            DOUBLE    =    13.379439

how get my 13.37943889 for calculus ?

If IDL rounding value, i've got worst results

Even for test example

How avoid this problem ?

Thanks
