I have problem with precision.

I typing

```
IDL> b=13.37943889D
```

and then i typing

```
IDL> help,b
```

```
B          DOUBLE   =    13.379439
```

how get my 13.37943889 for calculus ?

If IDL rounding value, i've got worst results

Even for test example

How avoid this problem ?

Thanks
