Hi,

I'm using IDL to make and overplot histograms of temperature. I create the first histogram from my first dataset and plot it. Then I overplot another histogram from the second dataset. I use a common binsize of 5 degreesK for both. My problem is that the bin-bounds don't align e.g. for my first histogram, say, a 5K bin is aligned between 20-25K, however for the second dataset the 5K bin is aligned between 22-27K.

My question is: how to I have a common bin-alignment between the two datasets?

Any ideas are more than welcome,

-C
