In a word, no.

Cheers,

David

Hi Bernat,

If you are on Windows you could try to use a tool called
AutomationAnywhere,
which will basically 'click the button for you'. I have never tried
it, so
I do not know if this works with IDL GUIs. The full version will also
set
you back around \$500, but maybe there are freeware alternatives on the
net.

Allard

Autolt is free alternative that allows for fairly sophisticated
scripting of windows guis.
