
Subject: How to draw IDLgrPlots over IDLgrImages?

Hi all,

I've a question about object graphics. How can I plot a group of IDLgrPlots over some IDLgrImages if I create the plots (and I add them to the model) firstly?

I know that the IDLgrModel is a container, so the objects are drawn in the order of the container. Right? If I don't want to use the Move method of the IDL_Container to place the IDLgrPlots at the end of the model, what can I do to plot the IDLgrPlots over the images?

Thanks,
nata
