Hi, my name is Gerben and i'm relatively new to this group.

That's because I just recently started using PV-Wave.

I have a question that probably most people had when they just started using PV-Wave!

First of all : I use this program in a Unix environment!

Now my question.

I was wondering if it was possible to transfer a filled array from Fortran environment to PV-Wave.

It seems to me that PV-Wave is an excellent program to work with data files but when I want to use it in an Fortran environment and transfer an array to PV-wave, wave falls short!

Can anyone help me with this one. Please E-mail me!

P.S. I use calls from within Fortran code with : CALL WAVECMD('.....
(This in case it wasn't clear what I meant!)

Thanks so much,
Gerben.
