
Subject: passing parameters to .sav file in IDL VM
Posted by [Prashanth](#) on Sun, 20 Sep 2009 21:06:55 GMT

Hi!

I have a procedure defined like

```
Pro changeview, file1,file2,file3
```

When I run it from the IDL command prompt in the workbench as
changeview, 'c:\june','c:\october','c:\june_oct'

it works fine

I tried to execute the changeview.sav file using the IDL VM in the
DOS window as follows

```
idl -vm=changeview.sav -args "c:\june" "c:\october" "c:\june_oct"
```

it is not accepting the arguments

Can anyone please help me with the passing of arguments while working
with IDL VM.

Also, how can I use the command line arguments when I have keyword
parameters like

```
pro changeview, file1=file1, file2=file2, file3=file3
```

Best regards,
Prashanth
