
Subject: KMEANS - lost in IDL4.0?

G'day all,

We've just had IDL4.0 installed, and things appear rather different now :-) In particular, the cluster-mean userlib KMEANS appears to have disappeared. Does anyone know if this is actually the case, or if our installation has just stuffed up? If it has gone, is there a straightforward replacement? I've been going through the new online manual, and can't find a thing about it.

This weekend is turning into a nightmare :-(

Thanks,

David.
