Ok, Java crashes in IDLDE related or not to Linux Dist is common for me but now I can't work.

When clicking in a file to edit from projetc explorer the follow happens:

Error: An error has occurred. See error log for more details.

Reason: java.lang.NoClassDefFoundError

I use IDL 7.0.2 on a Suse 10.3 on a i586 machine.

Solutions tried:

- (1) I copied the entire idlde folder from a partner
- (2) Upgrade of java
- (3) Go back Windows (Always sucessfull - But I prefer hard way Linux)

Someone has the solution ?

T.I.A.
