Girogio, you would need java 1.5.11

have a look at

http://www.ittvis.com/services/techtip.asp?ttid=4468 http://www.ittvis.com/services/techtip.asp?ttid=4395

and

http://www.ittvis.com/services/techtip.asp?ttid=4442

Jean

- Hi. Giorgio,

idlde for that we have to install some libraries

the package is from http://packages.ubuntu.com/dapper/libstdc++5-3.3-dev

download libstdc++5-3.3-dev in that select i386 machine one.

Above file contains 8 files, just do this way

sudo apt-get install -f libstdc++5-dev

Thanks

Kishore

Thanks for your information. The issue is that IDL7.0 was working fine under ubuntu 9.04. I've just upgraded to ubuntu 9.10 and I have the error on bin.linux.x86 libraries.

I've tried for IDL 7.1 and it works just fine. However I do not have a license for IDL 7.1.

Is it possible to configure idl7.0 to use the bin.linux.x86_64 folder of idl7.1? I guess it is possible since this is only related to the eclipse workbench and java and not the the idl software itself.

Giorgio
