Subject: Intensity Plot

I have spectral data over time....what I am trying to do is make a false color spectra by just using the intensities...i.e. time on y, wavelength on x, the "brightness" of color as intensity for each time on y. I have got everything normalized but I don't seem to be able to make the jump to the "brightness" on a single line part, any suggestions? I also get the jist of distributing the color across my wavelengths as well.
