I don't think there is a built-in command for this, so you will need to use a DLM or CALL_EXTERNAL. Check the ITT user contribution library. There was some code written for Windows by Lynn McGuire in 2000 that may be useful.

This would work on Windows:

```
spawn, 'dir', tmp  
VolumeID = tmp[1]
```

you would need to process the string, which is like
"Volume Serial Number is 2084-DBD5"
