Has anyone had a problem with DEFINE_KEY when upgrading from 3.6 to 4.0 IDL for PC-Windows? Function keys F5 thru F10 are no longer usable in my routines. I have attempted to to run SETUP_KEYS, but this just gives an error "Keyword ESCAPE not allowed in call to: DEFINE_KEY. Hope I'm just overlooking something simple. At least I still have 3.6 on the system and it runs fine!
