Hi

does one know a way to call a journal file by idl or idlde for windows from the shell?

In the past you were able to do a spawn, 'idlde.exe @my_script.pro' from a running idlde.

Otherwise I file a bug report.

cheers
Reimar

Perhaps I'm missing something but this isn't my experience of idl.exe for windows? It supports the -e command switch.

For example create C:\test.pro with
erm = dialog_message('test')

Now run
idl.exe -e "@C:\test.pro"

thx

I'll try

Reimar
