
Subject: segfaults on ubuntu 9.04

So maybe I didn't actually help Reimar...

I thought my installation was working properly, but now I'm having segfaults when I try to run some widgety applications (iplot, imap, idlexbr_assistant). But, for example, dialog_pickfile() is working properly.

I've found a simiar description of the problem on David Fanning's website (http://www.dfanning.com/misc_tips/segfault.html), but that was related to idl 6.3. Could this have creaped back in?

Anyone else having this problem?

Here's my system info:

Ubuntu 9.04;

Linux mattie-laptop 2.6.28-17-generic #58-Ubuntu SMP Tue Dec 1 18:57:07 UTC 2009 i686 GNU/Linux

IDL Version 7.1.1 (linux x86 m32). (c) 2009, ITT Visual Information Solutions

I would love some help.

Thanks

Matt
