Hi All,

I am trying to integrate IDL with J2EE front end. I am using IDL-Java bridge from IDL 7.1 on the Windows-7 (64 bit) OS. I am running the application in the Eclipse IDE (have used pluggins to open IDL in Eclipse Galileo). I have followed the steps mentioned in the IDL-Java Bridge manual.

I used the IDLEXBR_ASSISTANT to integrate

I have mentioned the javaidlb.jar in the classpath and also in the project class path. Its not showing any warning during the build. But when I tried to run the application I am getting the following errors.

Failed to load idl_ebutil from D:\Eclipse Workspace10\metadata
\.plugins\org.eclipse.wst.server.core\tmp0\wtpwebapps\RESDEM\WEB-INF
\lib\..\..\..\bin\bin.x86

Failed to load idl_ebutil from D:\Eclipse Workspace10\metadata
\.plugins\org.eclipse.wst.server.core\tmp0\wtpwebapps\RESDEM\WEB-INF
\lib\..\..\..\bin\bin.x86

Failed to load idl_bml from from default location.
Failed to load javaidlb from from default location.
