Good day Evrybody,

I'm trying to retreive data from binary file using this idl procedure
but can't make it to run properly under idl71, any help can be
appreciated, the file is located at:

http://www1.ncdc.noaa.gov/pub/data/gpcp/gpcp-v2.1/software/read_v2.1_file.pro
and it's the procedure to get GCPC data.

Thanks again for you help.

S.S.

I'd try something like this:

```
fields = Tag_Names(struct)
OpenW, lun, 'C:\cgcp\data.txt', /Get_Lun
FOR j=0,N_Elements(fields)-1 DO $
    PrintF, lun, fields[j], ': ', struct.[j]
Free_Lun, lun
```

Cheers,

David

Hi,

I tried this code but got a syntax error for .[j] when removing the dot (.) I got an error about 'j':

```
fields = Tag_Names(struct)
OpenW, lun, 'C:\cgcp\data.txt', /Get_Lun
FOR j=0,N_Elements(fields)-1 DO $
    PrintF, lun, fields[j], ': ', struct.[j]
Free_Lun, lun
```

Error:

```
IDL> PrintF, lun, fields[j], ': ', struc1979[j]
% Attempt to subscript STRUC1979 with J is out of range.
% Execution halted at: $MAIN$
```

with .j Error:

```
IDL> PrintF, lun, fields[j], ': ', STRUC1979.[j]
```

```
PrintF, lun, fields[j], ': ', STRUC1979.[j]
^
```

% Syntax error.

hi,
use () instead of [] STRUC1979.(j)

Jean
