Hello all,

The boss wants me to read DICOS format files, which are supposedly
derived from DICOM files. I've used the IDL routines and some home
brewed stuff to read DICOMs, but I can't fnd any useful information on
DICOS. Does anyone have any experience with this stuff, or know the
location of information/routines?

Thanks very much, I appreciate the help alot.

Mark

If they really conform to the DICOM standard, then they can likely be
readable. You will likely find that the DICOM data dictionary
probably doesn't include DICOS tags, so everything that is specific to
DICOS and not in DICOM will look like a private tag. I'd suggest you
give it a try with IDLffDICOM and see how it works.

Mike
