Hi Friends,

I have a problem in using the widget table.

My aim is to remove the slider bars since it is not required when data size is small (can be seen inside the small table)

It is mentioned in IDL HELP for Widget_Table as

" If the width or height specified is less than the size of the table,
scroll bars are added automatically. "

But the data i have given is 2*2 data and there should be no x & y slider bars ..

But it is showing the slider bars always even if the xwidth=2/
yheight=2

The source code is attached.....

```
#####
pro WID_BASE_0, GROUP_LEADER=wGroup, _EXTRA=_VWBExtra_
```

```
WID_BASE_0 = Widget_Base( GROUP_LEADER=wGroup, UNAME='WID_BASE_0' $  
,TITLE='IDL_cg',XPAD=3 ,YPAD=3,XOFFSET=5 ,YOFFSET=5)
```

```
V = [[1,2], [3,4]]
```

```
WID_TABLE_0 = Widget_Table(WID_BASE_0, UNAME='WID_TABLE_0' $  
,TAB_MODE=1 ,XOFFSET=15 ,YOFFSET=26 $ ;XSIZE-Width of table, YSIZE-  
Height of table  
, ALIGNMENT=1, VALUE=V) ;,XSIZE=2,YSIZE=2
```

```
Widget_Control, /REALIZE, WID_BASE_0
```

```
XManager, 'WID_BASE_0', WID_BASE_0, /NO_BLOCK
```

```
end
```

```
#####
```

I want to know whether this is an IDL related issue or can be solved
by checking the arguments to widget_table

Please respond ...

Thanks & Regards,
Kira
