Hi guys,

Is it possible to create an IDL exe program for Windows ?
I think the answer is NO but I just want to be sure. Until now, what
am I doing is create a simple SAV file with all the content of my
program and if somebody wants to use it, the installation of the IDL
virtual machine is required.

I don't know if there is a way to add the virtual machine inside the
executable, change the icon of the sav program, etc. I know I can
create a batch file to execute the SAV file but I don't know how to do
that exactly.

Suggestions or comments are appreciated.

The problem is the manifest file... The manifest file is trying to
find some files like libidl_ops.so.7.0
Could you send me a copy of your manifest file ?? Thank you !

Don't worry about the manifest file. A friend sent me a copy..
Thanks

Thanks for pointing that out. I edited the page to include a link to the manifest file I used, in case anybody needs it.

Is it working now?
