It seems that you want something like:

```
openw,unit,'output.dat',/get_lun
for i=0,999 do begin
  printf,unit,[5,62],in[* ,*,i],format='(I0,1X,I0,/,65(F-6.2))'
  printf,unit,'END'
endfor
fre_lun,unit
```

See IDL's help for the print procedure. It has links to the help on format codes.
