Hi,

I have a string array , e.g. White, with 100 elements as each element of the array contains 3 numbers

white[0]=0.265 0.156 0.35

white[1]=0.362 0.156 0.214

...

I want to conver the array to float but using the following function,
just the first number in each element is converted:

white_f=float(white) >>>0.265 0.362

I wonder how I can convert all numbers in each element of the string array to Number format.

Thanks
