Subject: interpolation of missing data

Hi

I have a quick question...

I have some data

```
a=[-99.9,-99.9,-99.9,1,-99.9,2,-99.9,-99.9,3,4,6,-99.9,2,-99.9,-99.9,-99.9]
```

for example. I want all the -99.9s to be replaced with an interpolation of the existent data surrounding them (linear interp or other) but not the -99.9s at each end.

I could do myself in a way that will work but may not be elegant. But then I might not learn something new, interesting and efficient!

Thanks

Russ
