
Subject: Desactivate "TIFF World File Input Projection" dialog

I am working on a batch in ENVI+IDL code which reads georeferenced images (ENVI supported images) using:

```
envi_open_file, fname, r_fid=fid, /NO_INTERACTIVE_QUERY, /NO_REALIZE
```

the problem comes when I try to open geoTIFF images with a spatial reference system (ETRS89 / UTM zone 30N, EPSG:25830). Then, the "TIFF World File Input Projection" dialog appears. Is there any way to avoid that window or catch the error that makes this window come up?

Thank your very much
