Folks,

One of the great annoyances of my life is the inability of Map_Grid to properly clip map grid labels if you are using anything other than Hershey fonts.

http://www.dfanning.com/map_tips/noclip.html

Of course, no one in their right mind would use Hershey fonts in a PostScript file, so this has greatly limited my ability to produce decent looking plots with map projections.

But no more. Today I got totally fed up with the situation and fixed the damn thing!

The result is a new program, named Modified_Map_Grid, that checks to see if the label point is inside the map plot boundaries and doesn't add the label unless it is. You can find the program here:

<http://tinyurl.com/yb26b4g>

Others who work with map projections may find this program helpful. :-)

Cheers,

David
