
Subject: How to get the current working directory

In IDL command line, if I type

```
CD, C=c & PRINT, c
```

I get

```
/home/bert_an
```

Say I have a routine main.pro under /home/bert_an/MyCode
so the complete path is /home/bert_an/MyCode/main.pro

Is there a function that while running main.pro gives me the path to
this file?

Example:

```
IDL> print, PathFunction  
/home/bert_an/MyCode
```

Thank you,
Andrés
