Dear all

I used to display IDL on the window system using 'window' such as,

window, 0, xs=900, ys=900

Now, however, I have to display my results on the unix system.

But if I use 'window, 0' on the unix system, there is errors like

% WINDOW: Unable to connect to X Windows display: :0.0

% WINDOW: Unable to open X Windows display.

Is your DISPLAY environment variable set correctly?

I am not familiar to use IDL on the unix system. So could anyone let me know how to display on the unix system?

Thank you very much in advance.
