hi,

is there a possibility to prevent the popup of VM before a .sav starts?

maybe to set the path/server of the licence in the program code and compile, save it as .sav and run it without popup?

appreciate any help,
sh

I am not sure, but I think that if IDL finds a license, it does not show the VM splash.

This is the difference between running the program with an IDL run-time license (available on Windows machines generally), and running the same program on an IDL Virtual Machine. When running on a Virtual Machine, you will **always** get the slash screen, unless you pay ITTVIS the big bucks to turn it off.

Cheers,

David

Has any one seen this type of dialog/splash screen when starting an application made with MAKE_RT on Windows?

<http://michaelgalloy.com/wp-content/uploads/2010/04/extra-splashscreen.png>

On Windows, I get this dialog before the VM popup; I don't get this dialog on Mac OS X.
