This may be a stupid question, but I really want to know why.
Please, see below and explain. Thanks.

```
IDL> print, 132*30
```

```
3960
```

```
IDL> print, 132*30*10
```

```
-25936
```

```
IDL> print, 132*300
```

```
-25936
```

```
IDL> data1 = 132
```

```
IDL> data2 = 300
```

```
IDL> data3 = data1*data2
```

```
IDL> print, data3
```

```
-25936
```
